EDUCATION

The University of British Columbia

Vancouver, BC

B.Sc., Combined Honors in Computer Science and Statistics, Co-op

Sep. 2019 - May 2024

Email: contact@antonchen.ca

Phone: Provided upon request

- Cumulative average of 91% (4.0 GPA) Trek Excellence Scholarships recipient (top 5% of undergraduate students).
- Coursework: statistical inference*, probability theory*, optimization, machine learning, analysis. (*graduate-level courses)

WORK EXPERIENCE

Amazon Web Services, Inc.

Vancouver, BC

Software Development Engineer Intern — EC2 Core Platform

May 2023 - Aug. 2023

- \bullet Designed serverless architecture to mitigate resource leaks, preventing up to ${f 244}$ leaks per day during peak call volume.
- Implemented eventually consistent workflow with Lambda functions in Python to concurrently delete generic resources.
- Leveraged optimistic locking and indexing strategies on **DynamoDB** table to facilitate 12 900 transactions per minute.
- Decoupled processing stages with SQS message queues and dead-letter queues, improving scalability and fault-tolerance.

Tesla, Inc.

Fremont, CA

Software Engineer Intern — Cell Engineering

Jan. 2023 – Apr. 2023

- Augmented conveyor cell routing automation in Go to route around equipment faults at Gigafactory Texas in Austin, TX.
- Designed routing algorithm on directed graph of equipment, identifying cells to reroute in linear time on equipment faults.
- Led cross-team initiative to design PLC-to-automation interface via **PostgreSQL**, enabling real-time equipment updates.
- Researched and proposed unsupervised statistical methods to enhance cell defect detection during manufacturing process.
- Applied kernel PCA on high-dimensional cell manufacturing data, increasing explained variance by 18% from baseline.

Amazon Web Services, Inc.

Vancouver, BC

Software Development Engineer Intern — EC2 Core Platform

May 2022 - Jul. 2022

- Built customer-facing feature for AWS Auto Scaling, the compute service behind many AWS services (e.g. ECS, Lambda).
- Extended the EC2 Auto Scaling public API in **Java** to support autoscaling of EC2 instances on metric math expressions, directly responsible for scaling EC2 capacity worth **180 million** compute hours per week. [Blog] [Documentation]
- Utilized CloudWatch alarms and metric math to generate custom metric time series for 293 000 users of the feature.

VIPRE Security Group

Burnaby, BC

Software Engineer Intern — Email Security Cloud

Jan. 2021 – Aug. 2021

- Created Python framework to automate spam and malware email testing, eliminating 40 hours of manual QA per week.
- Parallelized policy validation logic across multiple accounts with Robot Framework, reducing suite runtime by 65%.
- Trained and mentored intermediate software engineer; responsible for the onboarding and knowledge transfer processes.

Selected Projects

Campus Safe Walk Planner — Pinnacle Hackathon

Sep. 2021

- Created webapp offering safe trip planning at Pinnacle, an invite-only hackathon for the top 50 national collegiate teams.
- Architected pathfinding algorithm in **JavaScript**, integrating the Google Maps API with FBI crime data to route trips.

Rubik's Cube Solver Neural Network — Personal Project

Aug. 2020

• Designed and trained deep neural network with **TensorFlow**, perfectly solving any Rubik's cube with **70%** success rate.

SELECTED AWARDS

- Department of Computer Science Scholarship The University of British Columbia
 Stanley M Grant Scholarship in Mathematics The University of British Columbia
 Oct. 2021
- Ron Riddell and Roy Douglas Scholarship in Mathematics The University of British Columbia Oct. 2021
- J Fred Muir Memorial Scholarship in Science The University of British Columbia Sep. 2021

Technical Skills

- Languages: C, C++, Python, Java, Go, JavaScript, TypeScript, SQL, R, MATLAB, Julia.
- Frameworks and Libraries: NumPy, TensorFlow, Scikit-learn, Matplotlib, JUnit, Node.js, React.js.
- Technologies and Tools: Git, Linux, Bash, GraphQL, Redis, AWS (Lambda, DynamoDB, CDK, IAM, etc.).
